The mirSCAN™ assay features a carefully selected panel of validated miRNA biomarkers covering a broad range of diseases, preloaded in our PanelChip® for fast and efficient screening. Selected through rigorous literature mining and experimental validation, these biomarkers supports early detection, diagnosis, treatment support, and disease monitoring. With built-in exogenous and endogenous controls, the assay ensures reliable performance and precise quality assessment for every test.

For Research Use Only

Key Features

BROAD BIOMARKER RANGE

Includes a diverse set of validated miRNA biomarkers for comprehensive disease screening

BUILT-IN CONTROLS

Exogenous and endogenous controls ensure reliable results and quality assessment.

HIGH THROUGH PUT

Detects up to 100 targets with a maximum capacity of 6 samples per run

AI-POWERED DATA ANALYSIS

Automated Cq generation for fast and accurate quantification.

Simple and Ultra-fast Workflow

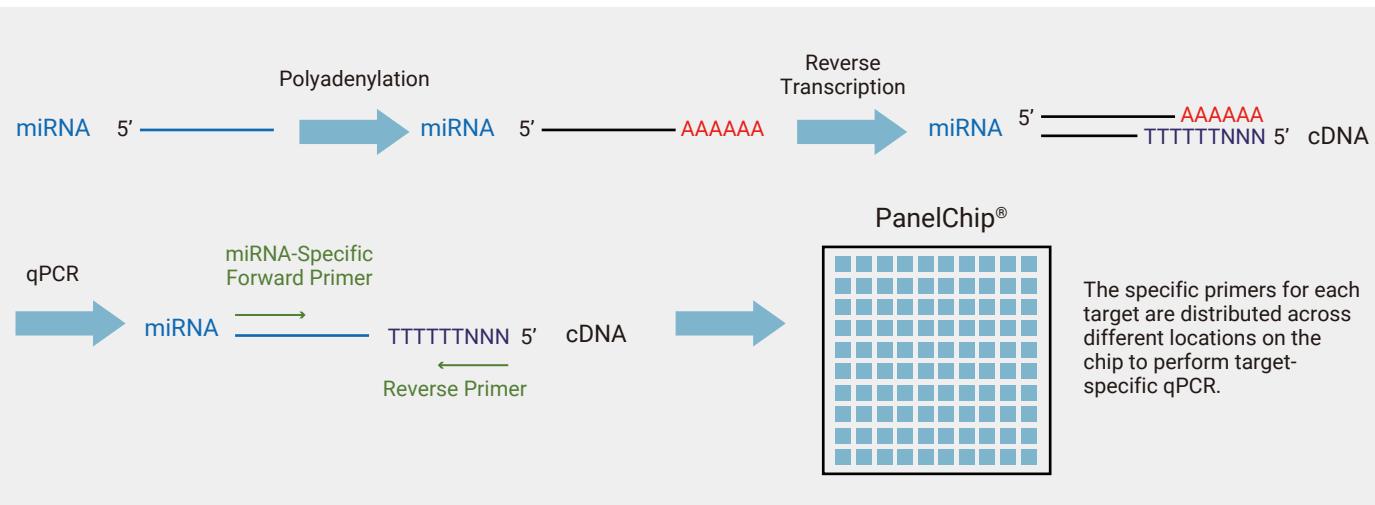

The advanced mirSCAN™ RT-qPCR platform provides complete results from RNA samples to Cq values in just 90 mins. With streamlined sample loading—completed in 3 simple steps within 10 seconds—mirSCAN™ offers unmatched speed and ease.

- Pre-arranged PanelChip® with miRNA primers for effortless setup
- Validated assays to ensure high reproducibility and precision
- Sample loading can be completed within 10 seconds
- AI-powered algorithm for automated Cq generation and analysis
- Built-in spike-in controls for enhanced accuracy

mirSCAN™ redefines efficiency, empowering researchers with quick, high-quality miRNA results and minimal hands-on time.

Precision miRNA Detection

mirSCAN™ miRNA detection utilizes a poly(A) tailing with an oligo-dT RT primer to generate cDNA for all miRNAs. In qPCR, a miRNA-specific forward primer and a reverse primer complementary to the oligo-dT sequence are used to amplify each target miRNA. An AI algorithm are employed to generate accurate Cq values, ensures high sensitivity and reliable miRNA profiling.
